The worst hit US STATE -

Mississippi	2,976,149	10,450	No New Data	No New Data	No New Data	No New Data	435.0	28%
--------------------	------------------	---------------	-------------	-------------	-------------	-------------	--------------	-----

Nations that have a lower mortality rate /100,000 than the United States.

Results show the outcome is interesting that Japan, India and others use [hydroxychloroquine](#) or Ivermetin based treatments, not forcing experimental mRNA treatments

Many nations DID NOT SHUT DOWN and have a better outcome.

[Treatments are NOT a cure, but some are shown to help the symptoms](#)

Data Source: <https://coronavirus.jhu.edu/map.html> DATA STOPPED March 10, 2023

Death counts are SINCE January 2020, so they are two plus years of data

NOTE: China cancelled 21Million cell phone records in March 2021 - it is

believed many of those were due to unreported COVID deaths

NOTE :

Examination of OUTCOMES is one method to study if different treatments and practices had any statistically significant results differences.

Using the DEATHS/100,000 rate - we compare the deaths reported with Covid

among many nations. Some nations forced closures, masks and experimental treatments

Other nations used known medicines and repurposed them - but did not close down

The USA was one where they shut down and polically forced an experimental treatment.

The fact is that ALL these nations had a BETTER OUTCOME than the USA.

This confirms what many US Doctors were saying, but were being harrassed by political

forces - even faced losing their jobs for expressing their professional medical opinions.
